Connecting to the RIC-GUEST network on a Mac with Leopard

By Andrew Larrivee

With a Mac, you can connect to the RIC-GUEST network wirelessly.

1. Notice the AirPort icon in the taskbar. It is the symbol to the left of the Volume Controls. Click on it.

2. Make sure AirPort is on. If it is not, click “Turn AirPort On.”

3. AirPort should automatically detect wireless networks in range. If it does, simply click on RIC-GUEST to connect.

4. If RIC-GUEST is not found automatically, click on “Join Other Network...”
5. In the “Network Name” box, enter “RIC-GUEST” and then click “Join.”
6. You will be connected to the RIC-GUEST network and the Internet.
