LIVE ICON PREVIEWS IN VISTA

By Pat Hetu

One of the newest features of Vista is the Live Icon preview feature which allows you to view thumbnails of your opened documents.

1. When you minimize your documents, they become small icons on the taskbar. In Windows XP, you could get a description of the minimized document by mousing over it. In Vista, you can now view a thumbnail of the document.

2. Mouse over one of the icons on the task bar. A thumbnail of the document appears along with a brief description.

3. When several documents from the same program are opened, you can still view the thumbnail by clicking on the down arrow of the icon, and then mousing over the document names listed.
