An enhanced search feature has been added to Windows Vista to make finding files, programs and other items on your PC much simpler.

1. Click the **windows start button** to open the start menu. The search box is located at the bottom.

2. Once you begin typing, note that suggestions to fit your search criteria appear above the search box. To find items on the internet, click **Search the Internet**.
3. The **Google** search page appears with the word you have typed in, and search choices for that item.
