

Active Directory Forest Migration

Overall Project Vision

Consolidate all College Computing Resources in a single domain Active Directory Forest in order to unify and improve management and security of those resources

Overview

In order to follow best practices in Active Directory (AD) implementation, the existing multi-domain AD forest is being replaced by a single domain forest, by recreating all relevant accounts, re-installing all domain dependent applications and migrate all data to the new forest. This will also allow for retiring servers with unsupported operating systems.

Objectives

- Apply a uniform naming structures and naming conventions across all AD objects
- Apply a uniform directory structure for all user and group objects in the AD domain to support identity and access management (IAM)
- Implement a uniform data management structure for all employees and
