Course Links
By Ryan Hanley

Course Links are useful when you want to add materials to your content area that are found in other areas of the course. For example, if you want users to go to a particular discussion board forum, you can link the forum to the content area to give them quick and easy access.

Note: If you want to add in a new Content Area on your Course Menu then refer to the “Adding and Editing a Content Area” white paper.

Creating a Course Link
Follow these instructions to create a Course Link. For this example, we will use a Discussion Board Forum as the linked material:

1. Click Content (or an appropriate content area).

2. Make sure Edit Mode is switched to ON.
3. Go to **Build** and click **Create Course Link**.

4. Fill out the **Course Link Information**.

   **Course Link Information**

   - **Name**: Hamlet Act 1 Forum
   - **Color of Name**: Black
   - **Text**: Click here to go to the Hamlet Act 1 Forum
5. Click **Browse** and find the material you would like to link to the content area.

6. Choose your options in the **Options** section. To make the link readily available, make sure that **Permit Users to View the Content Item** is set to **Yes**.

7. Click **Submit**.
