Performance Dashboard
By Scott Badger

The Performance Dashboard shows you up-to-date information on the activity of your course. Here you can see which students are gaining access to your course.

1. From the Control Panel, click Evaluation > Performance Dashboard.

2. The Performance Dashboard information will open.

3. You can see the last time your students have accessed your course and other items such as discussion board postings and view grades.
4. If you set a review status release on a particular item such as a Learning Module, you can click the Review Status number associated to a particular student.

5. Here you can see what item has been reviewed or not.

6. From the menu navigation at the top of course, click Performance Dashboard to move back the main Performance Dashboard main screen.
