USING THE USB PORTS ON THE SYMPODIUM ID370

1. The Sympodium ID370 is a high resolution screen designed to make classroom presentations very interactive. For example you can control computer applications or write with digital ink by touching the screen with the pen tool.

2. There are two easily accessible high speed USB ports – one is located on the bottom right corner of the monitor/screen.
3. The other is located on the bottom left hand corner of the monitor screen. Both accept external USB devices (i.e., external memory drives).
