Dragging/Rearranging Your Video to the Timeline

By Scott Badger

In this white paper, we’ll be using the Timeline, but just note that you can drag video clips down on the Storyboard. I just find it easier to see all of the components that have been added to your video project by using the Timeline.

1. Select the College Entrance video and then drag it down to the Timeline.

2. Now in the order as listed, drag the Training, College Entrance (1), and Tech Labs video clips down to the Timeline.

3. Now in the Timeline, click on the first video clip (College Entrance) and then click the Play button on the monitor view to preview your video so far.
Notice that the playback indicator is at the 00:00 mark on the Timeline. You can move the playback indicator to the right to play the video at any point to test out your video.
