How to Split Your Video Clip in the Contents Pane
By Scott Badger

Splitting a video clip allows you to customize your video. Splitting your video has the following benefits:

- Remove unwanted footage from a particular video clip
- Allowing you to apply different transitions and/or video effects to part of a video clip
- Apply Audio/Music to part of that video clip

1. Select the College Entrance video clip.

2. Notice that in the monitor view, the video has been paused and it’s at 0:00:00.00 / 0:00:24.69
3. Drag the Slider over so that the time displays 0:00:09.41 / 0:00:24.69

4. This is where you want to split particular video clip.

5. Click the Split button located at the bottom right of the monitor view. (Note: Other ways to split your video clips would be the following:
   a. Ctrl + L
   b. Clip > Split

6. Now the College Entrance video clip has been split into two video clips. You’ll see the new clip being displayed in the Contents Pane.
Note: Video clips need to be split before you drag them down to either the Storyboard or Timeline.
