Inserting Your Pictures into the Timeline
By Scott Badger

You can drag pictures to the Timeline or Storyboard. Pictures can be dragged from the Contents Pane and place at the beginning, end, or in the between existing video clips. In this white paper, we’ll going to place all of our pictures that are located in the Pictures folder of our project at the end of the last video clip (College Entrance 1).

1. Let’s first modify the picture duration when it’s placed on the Timeline.
2. Select Tools > Options.
   
   ![Options dialog box]

   3. In the Options dialog box, click the Advanced tab and then change the default picture duration setting to 10 seconds.
   4. Click Ok.
   
   ![Collections Pane]

   5. In the Collections Pane, select the Pictures folder.
   6. Hold down the Ctrl key and press the letter A to select all of the pictures in the audio folder.
7. Now drag the pictures down to the Timeline and place your pointer to the right of the last video clip (College Entrance (1)) and then click.

8. All of the pictures have been placed on the Timeline at the end of the last video clip.
